

## **Exodus Termite Inspection**

*Termatrac can detect Termites through timber, plasterboard, brick or masonry*

Exodus Pest Control are professionals in the inspection, detection and treatment of subterranean termites, drywood termites and borers.

Our experienced and qualified technicians will inspect your property or business using the latest detection equipment, then deliver an 8-page detailed report explaining exactly what mode of treatment (if any) your property requires. An inspection typically takes between 1½ and 2 hours, and is carried out under strict adherence to Australian Standards.

Exodus technicians use the highest quality inspection tools and pride themselves on delivering exceptional, ongoing customer service including friendly annual reminder letters and property history archiving. And should you require, excellent referees are available.

Upon entry to your property, Exodus will:

- Sit down and explain our termite inspection service, including what we will do, what we are looking for and what tools we will use.
- We will then thoroughly sound all internal timbers and take moisture readings of structural and decorative internal timbers and wall linings. Our technicians use Termatrac, which utilises technology similar to a radar and can detect termites through timber, plaster board, brick or masonry with no interference to the building material or termite activity.
- We will lift carpet edges, thoroughly inspect all roof timbers, then perform a detailed inspection of external walls (again using Termatrac) and check out weep holes, slab edges, guttering, downpipes, hot water systems and air-conditioning units. We will also inspect under any subfloors if applicable.
- Our technicians will then focus on your yard area, inspecting fences, trees, landscaping timbers and surrounds.

The cost of an Exodus Termite Inspection, which includes a detailed, 8-page inspection report and treatment proposal, is \$260 (discounted if combined with a General Pest Treatment). This is based on a 3/4 bedroom, 2 bathroom, double garage home on a standard size block.
